# Continuous Delivery

Visual Studio Team Foundation Server 2013

- 🔌 What is Continuous Delivery?
- 🔌 Continuous Delivery vs Continuous Deployment
- 🔌 Building a release pipeline in Visual Studio Team Foundation Server 2013

# Agile Manifesto

Our highest priority is to satisfy the customer  
**through early and continuous delivery**  
*of high-quality and valuable software*

... **reduce** the time it takes from  
deciding to make a change  
to having it available to users

...a set of **practices** and **principles** aimed at,  
building, testing, and releasing software  
**faster** and more **frequently**.

- ⏻ Acceptance Tests
- ⏻ Performance Tests
- ⏻ User Acceptance Tests
- ⏻ Manual Deployment on Environments

we  
on.

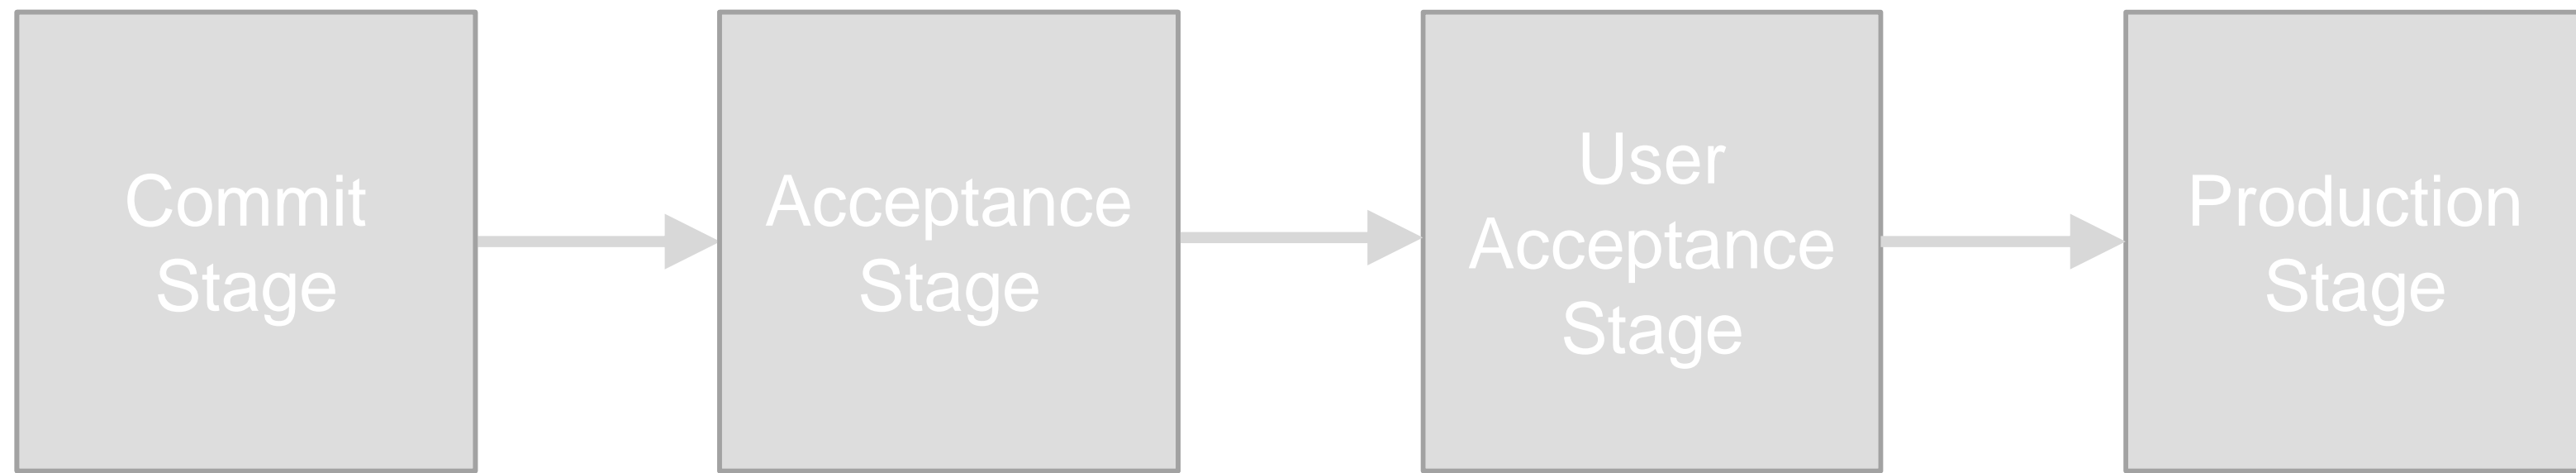

# Deployment Pipeline

- 🔌 Stages
- 🔌 Steps
- 🔌 Instances

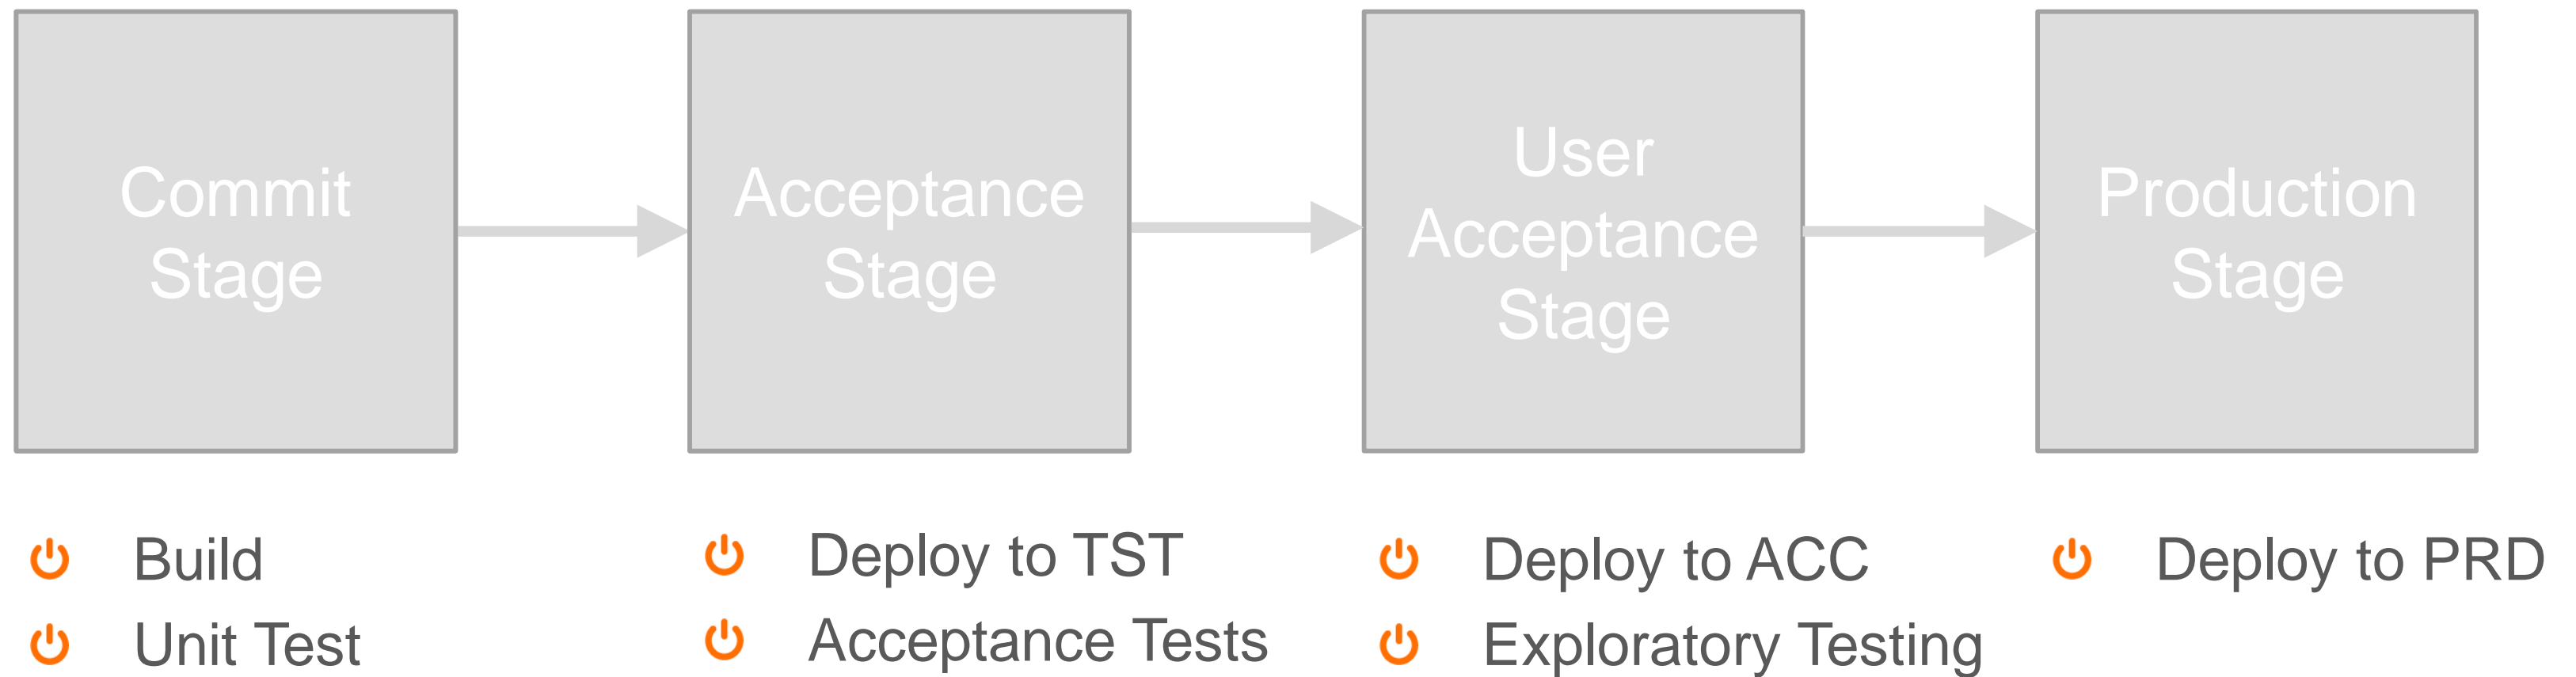

- ⏻ Build
- ⏻ Unit Test
- ⏻ Code Analysis

- ⏻ Acceptance Tests
- ⏻ Performance Tests

- ⏻ UAT
- ⏻ Exploratory Testing

- ⏻ Deploy to production
- ⏻ Smoke-Test

Create a **repeatable, reliable**  
process for **releasing** software

**Automate** almost everything

Keep everything in **Version Control**

If it **hurts**,  
do it more **frequently**,  
and bring the pain **forward**

Build **Quality** in

**Done means Released**

**Everybody is responsible**  
for the **delivery** process

## Continuous Improvement

Only **build** your binaries **once**

Deploy the **same way**  
to **every environment**

**Smoke-Test** your deployments

Deploy into a **copy** of **production**

Each **change**

should **propagate** through

the pipeline **instantly**

If **any part** of the pipeline **fails**,  
**stop** the line
